Every communication with Betfair is recorded here.

Once a session ends, this clears and will start fresh on next log in.

Hide/Show left hand menu

'Lollipop' toggle allows user to hide the left hand menu when on the market view.

This allows for more screen space when using the application on a smaller screen or laptop.

Closed panel after clicking 'lollipop'.

Support

Please quote this number **716953** any time you need to contact support.

This shows the users unique support number that should be used when you contact the BetJet Pro help desk to identify any issues.

[Contact Support:](#)

- Cancel All Bets **C** cancels all bets on all selections in the market
- Timed race progress to give indication of how much longer race has to go - this includes sound alerts for each quarter of race

Tools

BetJet Pro comes with tools that can be set to activate instantly upon the price reaching a certain point, a previous bet being matched or partially matched or a combination of things.

The Tools provide the following features:

- **Tick offset tool** - offset a back or lay bet at a pre-determined interval. You can choose to offset with the offset bet set to hedge, zero or net. Hedge will spread profit equally, zero will leave zero on your selection and profit on other runners, and net will leave all profit on the traded selection.
- **Stop loss tool** - Places exit bet to close a trade at a pre-determined interval. You can choose to stop out of the trade with the stop loss bet set to hedge, zero or net. Hedge will spread loss equally, zero will leave zero on your selection and loss on other runners, and net will leave all loss on the traded selection.
- **Fill or kill tool** - Cancels bet, or remaining portion of bet if not matched after the designated time (in settings) has elapsed.
- **Stop entry tool** - Enters a bet when the price pre-determined in settings is met.
- **Hedge bets** - Places a bet to spread profit or loss on a selection equally across all other selections in the event.
- **Zero-hedge bets** - Leaves zero profit or loss on the selection and spreads any profit or loss across all other selections
- **Net bets** - Places all profit or loss on the selection leaving zero on all other outcomes.
- **One click move bets** - Allows you to move a bet on the ladder from one price to another with a right click. If a bet is at 4.00 you simply move your cursor down to say 3.00 and right click in the same column you see the bet in and it will move. If more than one bet is in that column, it will move the bet nearest to the cursor.
